

Flutbox Flutbox Pro 300

**FLOOD HELPERS FOR PRIVATE
PERSONS AND PROFESSIONALS**

THE QUICK HELP IN THE PRIVATE HOUSEHOLD

Climate change does not stop at any cellar

Heavy rain, which causes rivers to burst their banks and buildings to be flooded, is unfortunately becoming more and more frequent. Jung Pumpen has designed the **Flutbox** as a **first aid kit for emergencies**. It consists of a carrying basket, a pressure hose and a powerful pump. If you live in flood-prone areas, a flood box in the basement makes a lot of sense. Even if you are surrounded by the biggest chaos - you only have to do two things: connect the hose and switch on the pump. It will reliably pump your flooded cellar free.

Three components - well thought out:

Carrying basket

- Integrated pump fixation for safe pump stand
- Protection of the pump from silting up
- Wall suspension for storage of the flood box

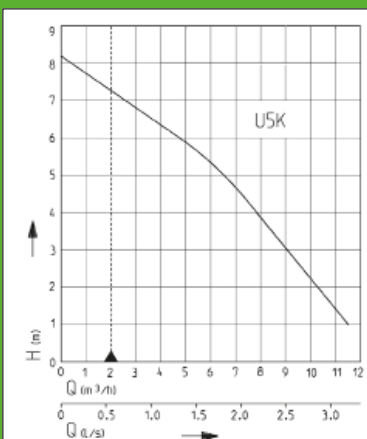

Pressure hose

- Length 12,5 m
- Quick, easy connection with Storz C-coupling
- Durable, long-lasting material
- Space-saving storage when rolled up
- Extension through Storz C-coupling

Pump U 5 KS

- Performance ($H_{\max}$ 8 m, $Q_{\max}$ 11.5 m³/h)
- Maximum operational safety due to 10 mm free passage in the strainer base
- Trouble-free continuous operation, even when submerged due to motor jacket cooling and thermal protection
- Remaining water level 35 mm with float lock, only 5 mm remaining water level when the strainer base is removed
- Cable length 10 m

Performance Flutbox

Flutbox Pro 300

THE POWERFUL PROFESSIONAL HELP

For more than just one cellar

If entire streets and houses are flooded, **professionals such as fire brigades and relief organisations** are called upon to intervene with heavy equipment and pump away water. Jung Pumpen has developed the **Flutbox Pro 300** for these increasingly frequent applications. In contrast to the Flutbox, it scores with a more powerful pump, a longer pressure hose and a transport safety device for the trips to the flooded regions.

The professional version with its advantages:

Transport box

- Tensioning strap to fix the pump during transport
- Protects the pump from silting up
- Keeps leaves and debris away from the pump

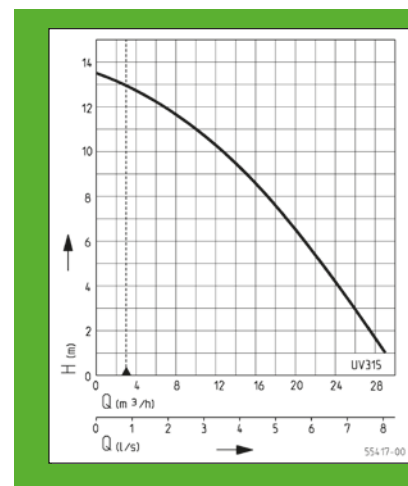

Pressure hose

- Length 15 m, diameter 52 mm
- Quick and easy connection with Storz C-coupling
- Durable, long-lasting material
- Space-saving storage when rolled up
- Extension through Storz-C coupling

Pump UV 315-1 S

- Performance ($H_{\max}$ 13.5 m, $Q_{\max}$ 28 m³/h)
- 10 mm free passage in the strainer base
- Trouble-free continuous operation even in the raised state due to motor jacket cooling and double thermal protection
- Can be used with or without transport box
- Remaining water level 20 mm with fixed float switch
- Very stable due to large strainer base

Performance Flutbox Pro 300

Flutbox

Even in the biggest confusion in the event of flooding, you can't go wrong when commissioning the flood box. Simply...

connect the hose...

switch on the pump...

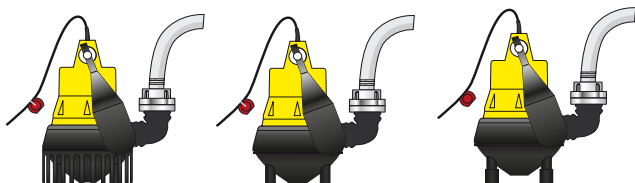

and let pump!

Moreover

...you can also use the heart of the Flutbox, the powerful U5 KS pump, in your home and garden without the carrying basket. Either mobile where it is needed or stationary.

Without carrying basket:

Simply loosen the holder on the pump handle and remove the pump

Low level pumping:

Remove the strainer base to achieve suction to the smallest residual water quantity

For the rough stuff:

With the stand extensions you use the entire free passage (20 mm)

Flutbox Pro 300

Entire streets under water? These are cases for...

...professional emergency services and Flutbox pro!

Simply connect the hose with the C-coupling and lead it outside as free of kinks as possible.

Prepare for pumping

Attach the submersible switch cable to the cable fixation of the pump's handle. For continuous operation, the immersion switch must point upwards.

Use in continuous operation

Can also be used without transport box
